BEST PRACTICE – I

1. Title of the Practice : **Orientation Programme**

2. Objectives of the Practice

in

To make the fresh students (B.Sc. I Sem; BCA I Sem; and M.Sc I Sem) aware of the infrastructure, academic and co-curricular faculties in the institution

3. The Context

Initially all the students are made to assemble at a common hall. The principal highlights the objectives of the orientation. Couple of Faculty members provide information on the institutional facilities, infrastructure, vision and mission, do's and don't's in the campus such as use of mobile, eve-teasing, harassments, ragging etc; co-curricular and extracurricular facilities, scholarships, examination related points etc.

The students are made groups of 25-30 and are attached to a team of three faculty members and were provided a hall for the activities. The faculty in-charge are trained with the CLHRD manuals for orientation programmes. The manual has mainly, teaching-learning components, teaching methodology, games, puzzles etc.

4. The Practice

The faculty members assigned conduct several modules of the CLHRD programmes by making several groups among students irrespective of gender. The students are provided with required material for their assignments viz., files, posters, color pencils/sketch pens, news papers etc. Using these materials, the students prepare their assignments and present their groups highlights.

5. Evidence of Success

The teaching-learning modules added with games, puzzles etc. make the students ease in the new campus and environment. They become free with their unknown friends, learn to mix up, get confidence, stage courage, show their talents, share the things, and build team management.

6. Problems Encountered and Resources Required

The students who join late miss this orientation programme as the regular classes will have started. Expenses for stationary, food, tea etc., are inevitable which is taken care by the institution.

7. Notes (Optional)

As the students stay in the campus for next 2-3 years, the orientation programme is quite effective to make the students feel at home. They are familiar with the campus, infrastructure, extracurricular and co-curricular aspects. This makes easy to manage the students in the campus.

BEST PRACTICE – II

1. TITLE: Academic Seminar For M.Sc. Organic Chemistry Students

2. Objectives of the practice:

This practice includes the students presenting the topics of syllabus including I, II and III semester. This practice is to enhance the greater insights of the studied topics and gather more knowledge and information and effectively present in the form of power point presentation along with the explanation of the topic widely as an introduction and precisely as a sub topic is covered. This shall include all the subtopics of the covered topics in their previous semester to extend their understanding capability of the particular topic assigned to them. This practice includes the discussion among their classmates and to the faculty in person for the problems they face.

3. The context:

The features included about deciding what a post graduate student can present and how he/she can extend her horizon in the specialization of his/her subject. Whether the topics assigned should include the covered topics of the syllabus or the topics can be covered from the research articles and journals or the current trends in organic chemistry.

The main challenges faced regarding this context that if assigned with the research articles or current trends is that only information a student can gather would be from the internet which will partial insight of the topic as the journal accessibility in the campus internet is low and only few research papers can be accessed. If assigned with the current trends in chemistry then the topics included would be of vast area and the student may not be able to present it precisely. So finally it was decided that covered topics of the previous semesters would be assigned as the library has large collection of books and the student can gather more information and would be able to present it confidently by discussing with the available faculty who would have taught the topic to them.

4. The practice:

The practice includes presenting the topic precisely including the important aspects and its applications in the industrial context. This practice can expose the student for his/her presenting and convincing capability to an audience and experts and to face the questions raised by them.

This includes providing them with evidences and references from where the information about the topic was collected. This also gives an insight about the capability of the student to understand the topic and to explore the current developments in the topic. In the context of higher education of India, this shall give the student a presenting capability to the interviewer and then make his/herself employable as the industry today demands how a convincing power of the candidate would benefit their industry.

The main constraints faced during this practice is to build the confidence in the student for the his/her capability. Few introvert students will not be able to discuss the problems with the faculty and this leads to their poor presenting skills. The student may not be able to access many books at the given stipulated period which shall restrict them to present just partial topic. Also the time given to them will be just an hour which shall include the discussion part also so basically the student can present it for 40 mins. The gathered information may not be completely included in the presenting slides which shall again stop the flow of the topic and may not be convincing to the audience. The structured information may be lost and the topic itself may not be able to be covered perfectly.

5. Evidence of success:

The target given to the students was a month time to prepare for the topic and they were able to collect, discuss the information and present it well. It also gave the audience a better understanding towards the topic as few students presented the topics in a highly structured manner and in a proper flow covering all the subtopics. Also the students were very good in giving an satisfying explanation for the doubts and questions raised by the junior semester students and the faculty. This also meant that the student shall perform well in his/her interview in future and increase his/her employ-ability factor.

The results included that the student could approach the faculty in person and also he/she could discuss with his/her batch mates and come with a outcome and a presentation. Also it developed the confidence in the person to stand and improvise his/herself to put the topic discussion precisely. The ample time given was utilized well and it also gave an understanding about various sources of knowledge available along with the prescribed books. It also gave a freedom to student to restructure the subtopics as per convenience. And this also meant inclusion of newer addition of the topic and the applicability of the topic in larger world.

6. Problems encountered and resources required:

The major problem encountered were some source unavailability of the sources and research articles and limited accessibility of the journals as most of them were paid journals the subscription may not be able to be afforded by the college grants. The major sources are the journal subscription and the latest edition books providing more newer information with the current trends and how this particular topic is useful in the industrial applicability. Most topics were theoretical and may not be must of interest to few audiences. But this shall instill the way it can be presented and modified for a good presentability.

The availability of the screens and also computers may be also a minor restrictions for preparing the topic effectively and also little knowledge of the power point presentation also poses few problems.
